

MACINTOSH INSTRUCTIONS - VHA

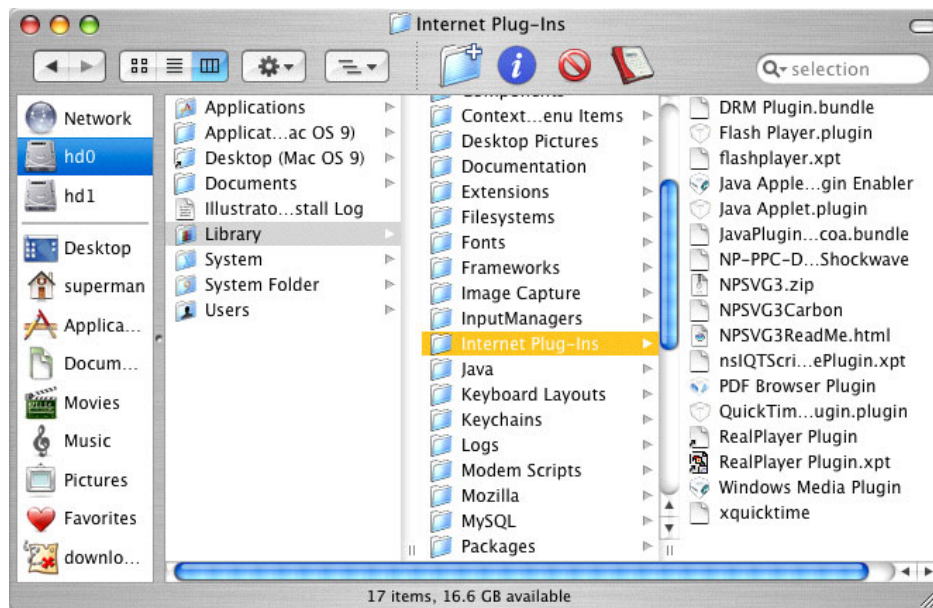

The instructions below must be followed in order to view the testimony videos in Macintosh OS X 10.2, 10.3, or 10.4 using the Safari Web browser (it will not work for earlier versions of the OS or for version 10.5 or for browsers other than Safari).

Part I of the instructions need only be done once for your computer. Part II must be done prior to each session in which you wish to view testimonies.

Part I: Install the xquicktime plug-in

Download the xquicktime plug-in at <http://www.vha.fu-berlin.de/download/xquicktime.sit>.

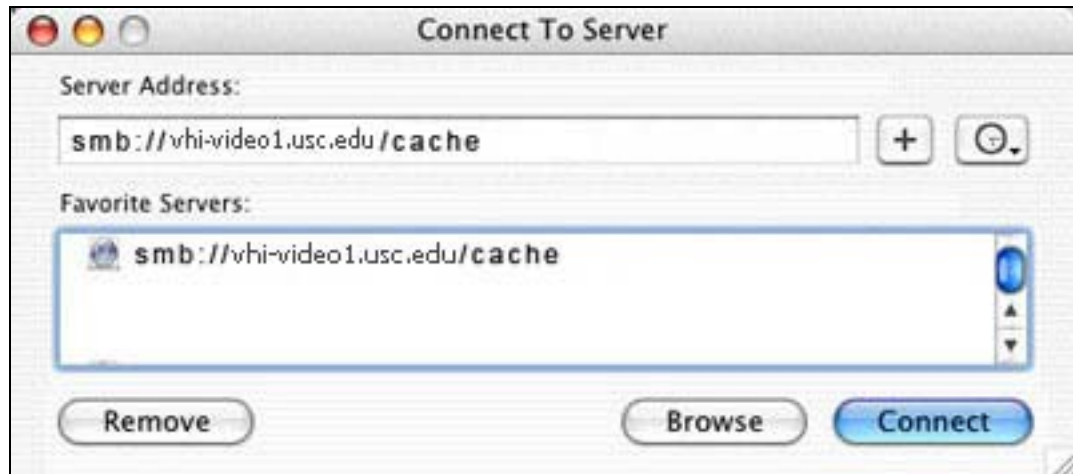

1. If it does not automatically extract (i.e. if the file name ends with '.sit'), find it in your download location and double-click it to extract. You may need to install the free version of Stuffit to extract the plug-in.
2. Quit Safari
3. Place the *xquicktime* plug-in in the */Library/Internet Plug-Ins/* folder

4. Restart Safari (you may also have to restart your Mac)

Part II: Mount the Cache Server

1. While in the Finder, Select 'Connect to server...' under the 'Go' menu
2. In the Server Address field, enter: *smb://vhi-video1.usc.edu/cache* then click 'Connect'

3. When the next box comes up, enter nothing and simply click 'OK'
4. A server named 'CACHE' will now show up on your desktop. (A folder named 'mpeg' may also open.) You can now connect to the VHA site and view testimonies.
5. When you have finished your session, unmount the CACHE server by either dragging it to the trash, or selecting it and choosing 'Eject "CACHE"' from the 'File' menu in the finder
